

Table of contents

1. INTRODUCTION	5
2. THE STATE AID CONTROL INSTRUMENTS. THE BALANCE BETWEEN COMPETITIVENESS, COMPETITION AND ENVIRONMENTAL PROTECTION	6
2.1. Environmental protection.	6
2.2. Competition, trade and competitiveness. Impact on regulatory asymmetries	7
2.3. The balancing exercise. A right balance? Coordination with other instruments	9
2.4. Concluding remarks and policy recommendations	11
3. THE ENERGY TAX DIRECTIVE	13
3.1. Balance between competitiveness and environmental protection	13
3.2. Coordination with the other instruments	14
3.2.1. Absence of clear coordination between the ETD and the EU ETS	14
3.2.2. De facto coordination with BTAs	15
3.2.3. Explicit reference to state aids.	15
3.3. Regulatory asymmetries intra-EU and extra-EU.	15
4. THE EMISSION TRADE SYSTEM	16
4.1. Introduction.	16
4.2. Impact on competitiveness related to electricity prices.	17
4.3. Impact on competitiveness of energy-intensive industrial sectors	17
4.4. “Energy efficiency” and “Environmental Innovation”: A balance for competitiveness and environmental protection.	18
4.5. Coordination with other environmental instruments: EU ETS as an element of an environmental tax system.	19
4.6. Regulatory asymmetries intra-EU and extra-EU: “carbon leakage”	19
4.7. Concluding remarks and recommendations	20
5. ENVIRONMENTAL BORDER TAX ADJUSTMENTS (EBTASS)	20
5.1. Between competitiveness and environmental protection.	20
5.2. EBTAs and their coordination with other fiscal instruments	23
5.3. Regulatory asymmetries intra-EU and extra-EU	24
5.4. Conclusions & Policy recommendations.	24
6. BIBLIOGRAPHY	25
